

ANNOUNCEMENT: DISTRIBUTION BOBC FOR EVORICH MEMBERS

Hong Kong, 26 March 2022

Dear Evorich Member,

We, at the request of Mr Andrej Khovratov, have the honour to bring you the good news he announced last Saturday, 19 March 2022, during the closed meeting;

In March 2021, Mr Khovratov privately invested in Bob Eco by purchasing BOBC Tokens. He bought one million tokens for \$0.30 per Token. This was a personal investment since all WCRU Global Investment Portfolio funds were already allocated to other projects.

As expected, the development of the Bob project went very well and even beyond everyone's expectations. The value of Bobcoin Token rose to almost \$ 11.00 within a brief period of time. Although the development of the Bobcoin project is on schedule and the STO-CAP functions very well (more the 95% positive reactions from its customers). One of the STO-CAP's standards is that a token should be listed and tradable on public crypto exchanges within 12 months from its launch. This listing makes the Token a publicly tradeable asset on centralised exchanges within 12 months.

Mid-December, Bob Eco announced that the STO-Cap's BOBC Token would be converted into public tokens in February available on various exchanges (Knaken, Bitmart, XT.com, Lbank, Coinsbit, Decoin, Bitmart and others). At the launch, the token value had risen to \$11.00. To prevent an emotional obstacle to participating for new users due to a high token value, the token value was cut (1:10), and the token amount was cut (10:1), leading to the new token value of \$1.10 per Bobcoin at the time of launch.

Mr Khovratov requested the management of Bob Eco and the STO-CAP if he would be able to divide his investment (Bobcoins) over his members by putting his personal investment into the WCRU Global Investment Portfolio. Since the coins are his, he is free to do this. We would be happy to welcome all Evorich members as customers/members/investors on the STO-CAP!

After discussing how to do this, we've decided that the following approach is the easiest: All Evorich members will receive an e-mail from the STO-CAP with their login and password in the coming weeks. After login in, you will get your Bobcoins in your wallet. At that moment, you can also change your password and add 2FA security to your wallet. Following the KYC procedure might also be necessary since we do not know if we can "take over" the KYC information. Like all Bobcoins on the STO-CAP, these Bobcoins are still frozen. During the first months and

the release year, all Bobcoins on the STO-CAP are subjected to a defrosting schedule to prevent dumping on exchanges. They will start defrosting within 1-2 months since the trade on the other exchanges is going well. When the defrosting starts (planning April/May), you can automatically send your Bobcoins to any exchange or wallet. Therefore, we recommend opening an account in one of the (before mentioned) exchanges Bobcoin is trading on. Then you can follow, and if wished, trade-in Bobcoins, the Bobcoins you received from Mr Khovratov can also be added to your wallet; after that, the defrosting phase starts for the Bobcoins in STO-CAP.

How many Bobcoins will you get?

WCRU Inc. has sold almost 25,500,000,000 WCRU tokens. Mr Khovratov has 10,000,000 coins to divide, meaning that for every 2,550 WCRU, you will receive one Bobcoin.

Example: If you have 800,000 WCRU, you will receive

$$\frac{800,000}{2,550} = 313,7 = 314 \text{ Bobcoins}$$

These Bobcoins have a value that you can follow on the exchanges. Here below, we will explain our expectations of value development. So far, on the technical and practical side, we, on behalf of our management and Mr Khovratov, look forward to welcoming you to the STO-CAP!

What is the Bobcoin?

What is the Bobcoin?

What is the expectation for Bobcoin?

For Bobcoin, the journey has just begun. We introduced the coin 2-3 weeks ago on several exchanges, and in the following weeks, more exchanges will be added. The marketing initiatives have not started yet because we wished to let all practical things do their work. The expectation is that the value development will go faster in the coming weeks. Bobcoin is currently publicly trading between \$1.50 and \$2.00. Before summer, the price is expected to move to \$10-20 and the end of the year to \$50.00. Because 10-20 of the more significant exchanges such as Binance and Coinbase have already announced that Bobcoin is an asset they will adopt in their wallets, from the value perspective, we can now say that the actual high-value development has not started yet! You are in a very early stage.

What is the difference between the Bobcoins you can buy and sell on the exchanges already and the Bobcoins in your STO-CAP wallet?

There is no difference between those coins! They are yours, and they will be made available to you immediately at defrosting. All people (like Mr Khovratov) who have bought Tokens in the first year are obliged to a defrosting schedule. This schedule will be sharply followed (STO-CAP rules); the defrosting will start late April early May 2022. From that moment, you are free to trade/transfer and sell your Bobcoins. In the meantime, you can already follow the value and trade on all the exchanges. On both STO-CAP as exchanges, it is also possible to buy extra Bobcoins off course, on the ones you buy at the exchanges (Bitmart, XT.com, Lbank, Coinsbit, Deco in and others) now you can trade freely. The ones on STO-CAP are frozen like yours, but STO-CAP also has referral links that can contribute to extra earnings. All ranks and models of the STO-CAP (and your status/structure) are the same as Evorich has requested to give you as an individual the same status as you have now in Evorich (consultant, manager, top-manager, leader, top-leader etc.) The reward system on the STO-CAP is the same as in Evorich.

The STO-CAP, this is what you can expect

The STO-CAP is a platform developed to help projects or companies such as Bob Eco grow and develop towards higher levels and sizes. A project or company that gets listed is intensively followed for the first year, where milestones and planning are essential. Also, clear communication in newsletters towards the participants is one of the critical standards in the STO-CAP. During the first year, the token value was an equity coin linked to the company's balance sheet value. And the development of the company/project. Within 12 months, a project/company/token needs to be brought to tradeable tokens on known public exchanges. People that have invested in Token are so "guaranteed" that they can start "cashing" or "selling" their investment (in the Token, which is then a tradeable coin).

Now that the Bob Eco Tokens have been converted into Bobcoins and are tradeable, STO-CAP is currently very busy starting up new projects in the same way. Soon, STO-CAP expects to announce new projects that will follow the same path again. During several meetings last week, Evorich is also very welcome with their assignments, so our teams can study if they can also be listed on the STO-CAP in the (near) future.

Best Regards,

Bob C. Ultee
On behalf of Bob Eco and STO-CAP
